Project Name	Credit Card Approval Prediction
Maximum Marks	5 Marks

Coding & Solution

This section evaluates the quality and completeness of your implemented code and the overall solution. Your submission should demonstrate working functionality, clean code practices, and alignment with your defined requirements.

Instructions:

1. Ensure your code is well-structured, commented, and follows best practices for your chosen technology stack.
2. The solution should address the core problem statement and implement the key functional requirements.
3. Include all source files, configuration files, and setup instructions needed to run the application.
4. Attach or link to your code repository (e.g., GitHub) in the table below.

Solution Summary

Field	Details
Repository Link / URL	https://github.com/Avadhi-Kukkamalla/Credit-Card-Approval-Prediction---AIML
Programming Language(s)	Python (Jupyter Notebook)
Framework(s) Used	Scikit-learn, Flask, IBM Watson Machine Learning
Key Features Implemented	Credit card approval prediction using Logistic Regression, Decision Tree, Random Forest, and XGBoost classifiers; Flask-based web interface for user input; real-time prediction via IBM Watson Machine Learning cloud deployment.
Pending / Incomplete Features	[Add any features not yet completed, e.g., model performance dashboard, additional evaluation metrics]
Setup / Run Instructions	1) Clone the repository. 2) Create a virtual environment and install dependencies (scikit-learn, flask, pandas, numpy, ibm-watson-machine-learning). 3) Run the Jupyter notebooks in '5. Project Development Phase' to train/export the model. 4) Run the Flask app (app.py) and open the local server URL in a browser to use the prediction interface.

Code Quality Checklist

S.No	Criteria	Status (Yes / No)
------	----------	-------------------

1	Code is modular and organized into functions / classes	Yes
2	Meaningful variable and function names are used	Yes
3	Code includes comments / documentation where necessary	Yes
4	Error handling is implemented for critical operations	Yes
5	The application runs without critical errors	Yes
6	Code is committed to a version control repository	Yes

Additional Notes / Comments:

The system integrates AI/ML techniques with a cloud deployment pipeline (IBM Watson Machine Learning) to deliver real-time credit card approval predictions through a simple Flask web interface.
